

# Strategic Environmental Oil Spill Response Plan

Andøya

Map title: Operational depth/Operasjonsdyp  
Hs 1,5 - 2,5 m

## Legend

- Selected case area/Utvalgt område
- Intertidal zone/Tørrfallsområde
- Water depth**
  - Incompletely mapped/Mangelfullt kartlagt
  - Less than 5 m depth/Mindre enn 5 m dyp
  - Less than 10 m depth/Mindre enn 10 m dyp
  - Less than 20 m depth/Mindre enn 20 m dyp

## HOW TO USE THIS MAP

In this map, areas of water depth less than 10 m are indicated. These are areas where there are operational restrictions for ship borne oil spill recovery systems under wave conditions as specified in the map legend.

The map also shows the extent of the intertidal zone. Where sheltered, such areas have a high biological productivity. In addition, oil recovery operations in such areas are labour intensive and challenging. Where available, areas where driftwood tend to aggregate are indicated, as well as tidal current directions (not currently available for this area). Areas where driftwood tend to aggregate are areas where also oil would tend to aggregate

In a given situation, the map gives an indication of operational possibilities and limitations on the windward side.

Not to be used for navigation

This map is prepared by the Sensitive Environments Decision Support Group (SenseE) within Akvaplan-niva, as part of the strategic environmental oil spill response plan for the area within the map frame.

The concept and format of these thematic maps were developed by SenseE, for a well drilled by Noreco Norway AS in the spring of 2012.

The concept of strategic environmental response plans was published at the IOSC conference in 2010.
